

PRESS RELEASE

TTi TO CONDUCT MADMAT DEMONSTRATION FOR F1 IN AUSTIN, TX

FOR IMMEDIATE RELEASE:

September 26, 2016
(PRN16-02)

CENTREVILLE, VA:

TTi will be demonstrating the capabilities of its MADMAT (Multipurpose Aviation Decking Material) to representatives from Formula One (F1) at the Circuit of the Americas in advance of the US Grand Prix next month. MADMAT is a modular spill containment system that provides passive fire suppression for use in a wide variety of industrial and commercial applications. Capable of suppressing flames, smoke, and heat produced from flammable liquids, MADMAT is a unique fire safety system that addresses a critical need in motorsports and anywhere else hazardous materials are stored or distributed. During a previous test for F1 in Barcelona, Spain FIA's F1 Race Director Charlie Whiting stated that, "The teams are all quite keen on this, extremely keen on it, and the possibilities are quite endless."

Dennis Hayden, CEO of TTi added, "In previous testing, MADMAT dramatically reduced the levels of smoke and flame produced while keeping surface temperatures below 200°F even while fuel burned in the containment tray below. Based on customer input, we've modified the design to make it lightweight and portable in order to meet the unique logistical needs of the F1 teams. We look forward to showing how MADMAT can be a cost effective solution that drastically reduces the risk of fuel fires in motorsports and elsewhere."

Temeku Technologies, Inc. (TTi) is a veteran owned small business founded in 1992 serving governments, the world's largest defense contractors, and the most exacting industrials. Headquartered in Northern Virginia, TTi provides engineering and consulting services supporting ship designers, naval architects, shipbuilders, and operators for new-builds, refits, and conversions. TTi is an inspired team of multidisciplinary professionals providing solutions to complex problems at the nexus of advanced technology and common sense.
